PROFESSIONAL SUMMARY

Full-stack developer and UI/UX designer who takes work from the first Figma screen through to a deployed, findable site. Two years of project-based freelance work across 14+ web and mobile builds for 10+ clients, in PHP, React, Flutter and Figma, including the SEO setup that gets the result found.

WORK EXPERIENCE

FREELANCE

Isabela, Philippines (Remote)

Full Stack Developer (Project-Based)

May 2024 - Present

- Delivered 14+ web and mobile projects for 10+ individual and business clients, from planning and design through to deployment.
- Built secure authentication, role-based access control, relational database integration, and REST API layers in PHP, MySQL, PostgreSQL, and Flutter.
- Automated document generation, email notification, and reporting workflows, replacing manual administrative steps for clients.
- Built dashboards and data visualisation reporting so clients could act on their own operational data.
- Debugged, tested, and optimised live systems, resolving performance and reliability issues after handover.

UI/UX Designer (Project-Based)

December 2025 - September 2026

- Designed a language learning centre's student portal end to end in Figma - course catalogue and enrolment, per-skill progress, graded exam sessions leading to a certificate, and a paid upgrade tier.
- Built a proficiency breakdown scoring grammar, vocabulary, reading, and writing separately, rather than reducing a learner to a single figure.
- Carried self-directed concept work to the same standard, including a brand and landing page taken through to a documented design system with palette, type scale, and component specifications.
- Drew every screen in its real states - empty, loading, partial progress, mixed results - so handover required no guesswork about the in-between cases.

SCHOOL DIVISION OFFICE OF CAGAYAN

Tuguegarao City, Philippines

Student Intern

February 2026 - May 2026

- Assisted the Records Office and ICT Unit in maintaining internal office systems and digital records.
- Developed and maintained web-based applications using PHP, MySQL, HTML, CSS, and JavaScript.
- Improved interface usability and accessibility across internal tools.
- Provided technical support, troubleshooting hardware and software issues across office workstations.

SELECTED PROJECTS

Helix Group | Web Designer, Front-End Developer & SEO Specialist

Wix • HTML • CSS • Technical SEO

- Redesigned a Sydney construction firm's website in Wix with custom HTML and CSS, replacing long unbroken copy with a scannable brand-led layout across services, portfolio, and testimonials.
- Set up on-page SEO, metadata, and indexing so the firm's work is findable in search.

LandKoTo – Land Record Management System | UI/UX Designer & Full-Stack Developer

PHP • MySQL • Bootstrap • Figma

- Replaced an assessor's office's spreadsheets and paper folders with one platform: property records, document storage, an interactive map, and automated certificates.
- Designed the interface in Figma before building it, and added an audit trail keeping ownership history traceable.

Smart Plate – AI Meal Planning App | UI/UX Designer & Full-Stack Developer

Flutter • Dart • PostgreSQL • Figma

- Built a mobile app that generates meal plans rather than logging them, taking dietary preferences and health goals in and returning a plan, shopping list, and nutritional breakdown.
- Added real-time alerts when calories or nutrients drift off target.

Corn Leaf Nutrient Deficiency Detector | Mobile Developer

Flutter • TensorFlow Lite • YOLOv8 • EfficientNetB0

- Built a Flutter app detecting nitrogen, phosphorus, and potassium deficiency in a corn leaf entirely offline, with a YOLOv8 detector and EfficientNetB0 classifier running on-device.
- Returned the matching fertiliser, application rate, and timing for each diagnosis.

Volterra Electric & C2WAD | UI/UX Designer (Self-Directed)

Figma • Design Systems

- Volterra: a concept brand and landing page for an electrical contractor, documented as a full design system with palette, type scale, and pixel-level component specifications.
- C2WAD: a food delivery app designed as a complete loop - browsing, ordering, live tracking, payments, notifications, support, and rewards.

TECHNICAL SKILLS

- **Languages:** PHP, JavaScript, Dart, Python, Java, C++, SQL
- **Frameworks & Libraries:** React, Laravel, Flutter, Node.js, Tailwind CSS, Bootstrap, Vite
- **Databases:** MySQL, PostgreSQL, MariaDB, MongoDB, Microsoft SQL Server, Supabase
